

Isolation Transmitter

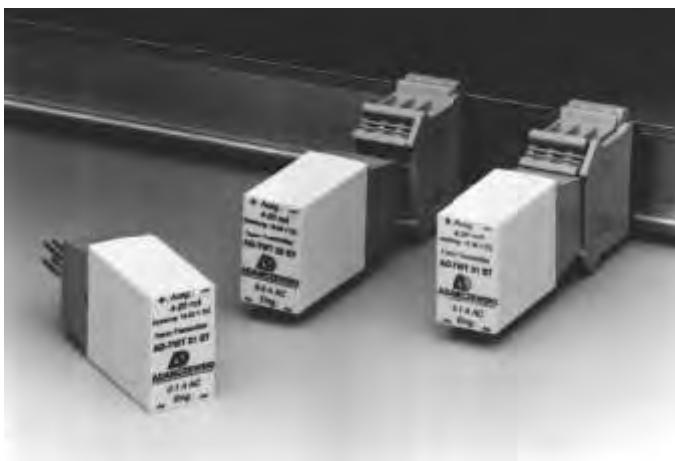

AD-TWT 21 GS
AD-TWT 25 GS

Description

The passive AC isolator transformer serves as converter of sizes 0-1A AC or 0-5A AC in a non-conductive DC of 0-20mA. The galvanically isolated input signal is independent of the connected load up to a maximum value. The isolation transformer requires no auxiliary energy, the necessary energy is gained from the measuring signal. The user friendly plug-in module design enables fast and problem free fitting with small space requirement.

Application

Economical galvanical isolation and conversion of alternating current signals in an impressed 4-20 mA signal with facile to employ 2-wire-transmitter-technic.

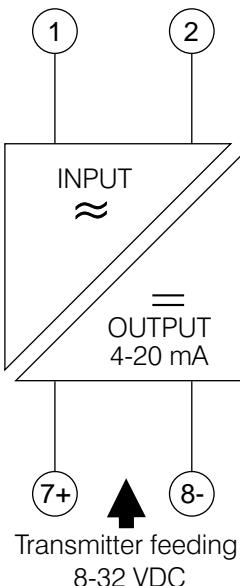

Specification

- 2-wire-transmitter technic, low wiring elaborateness
- high linear conversion with galvanical isolation
- output signal of 4-20 mA independent from supply voltage
- facile applicable plug-construction system on terminal block
- connection compatible for further passive Isolation transmitter.

Description:

Construction type:	1-channel switchboard housing
Power supply:	8-32 V DC
Input:	AD-TWT 21 ST: 0-1 A AC AD-TWT 25 ST: 0-5 A AC AD-TWT 61 ST: 0-400 V AC each with 50 Hz, sinus
Power supply drop:	no
Influence in temperature:	< 150 ppm/K
Reaction time:	ca. 700 ms (10-90%)
Output:	4-20 mA
Load:	$R_b = (U_{sp} - 8V) / 20 \text{ mA}$
Ripple frequency:	max. 0,5% from the final value
Linearity:	< 0,2 % from the final value
Isolation test voltage:	4 kV RMS
Ambient temperature:	0-50 °C
Protection:	over voltage protection 39 V over current protection approx. 75 mA over temperature protection

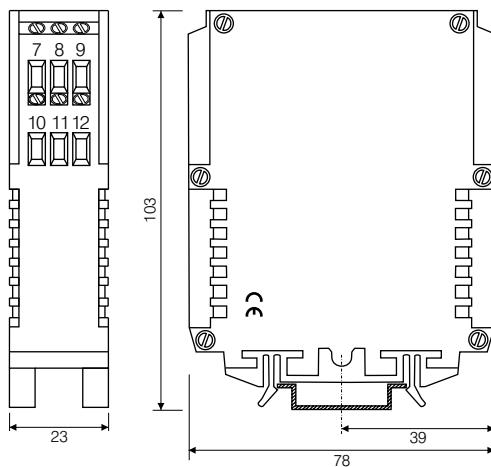

Anschlusschema und Maße: AD-TWT 21 GS AD-TWT 25 GS

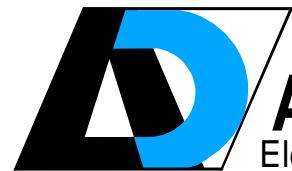

Front view

Gewicht: max. 150 g
Schutzart: IP 20
Befestigungsart
Normschiene: NS35/7,5

Anschlussdaten:
feindrähtig: 2,5 mm²
eindrähtig: 4 mm²
Spannung: 250 V~

Printed 04/2008. We reserve the right for technical changes
